

Main Application Menu

The main application menu shows the installed plug-ins. You can also access to the server settings using the menu.

Server settings

The server settings screen allows you to configure options related to the server.

IP or host name configuration

Enter the IP address or host name where the server can be reached.

Port configuration

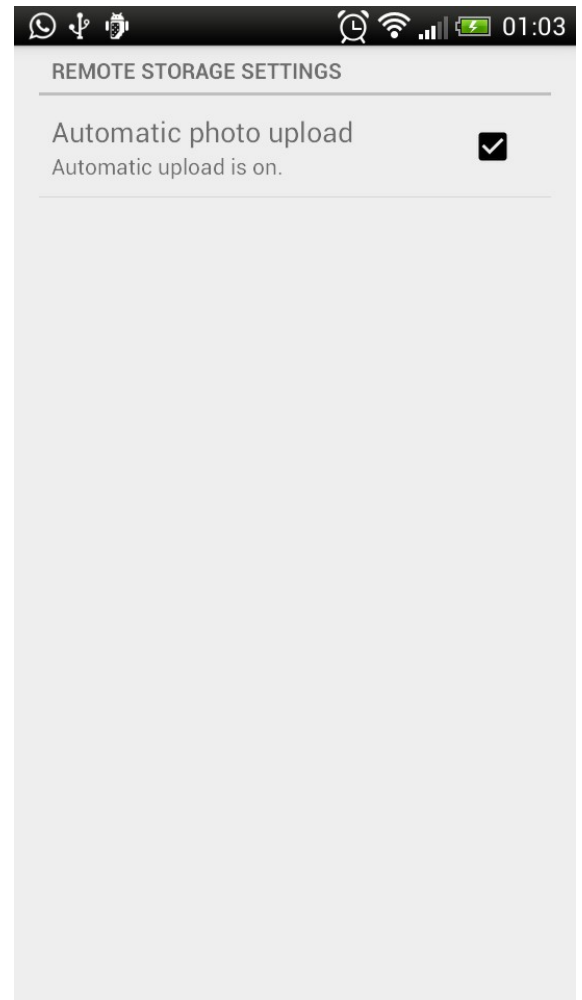

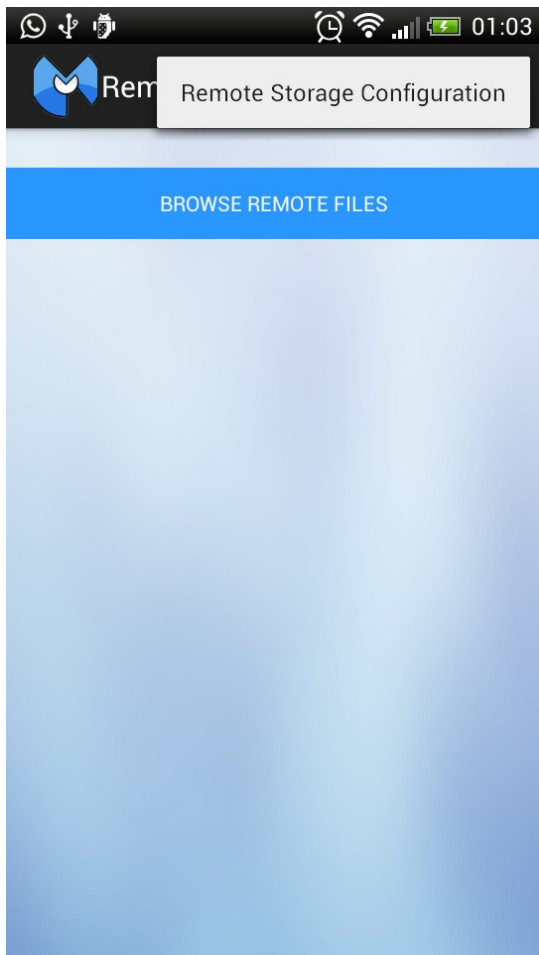

Enter the port the server is running on.

Remote Storage

The Remote Storage plug-in allows you to browse remote files and to upload photos automatically.

Remote Storage Configuration menu

You can access the Remote Storage Configuration by clicking on the menu icon.

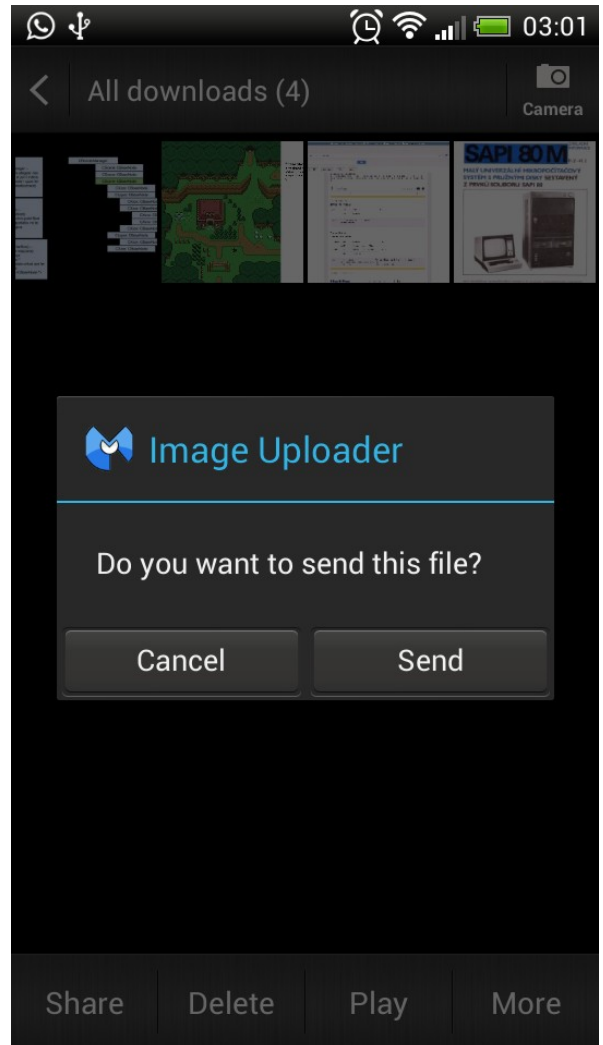

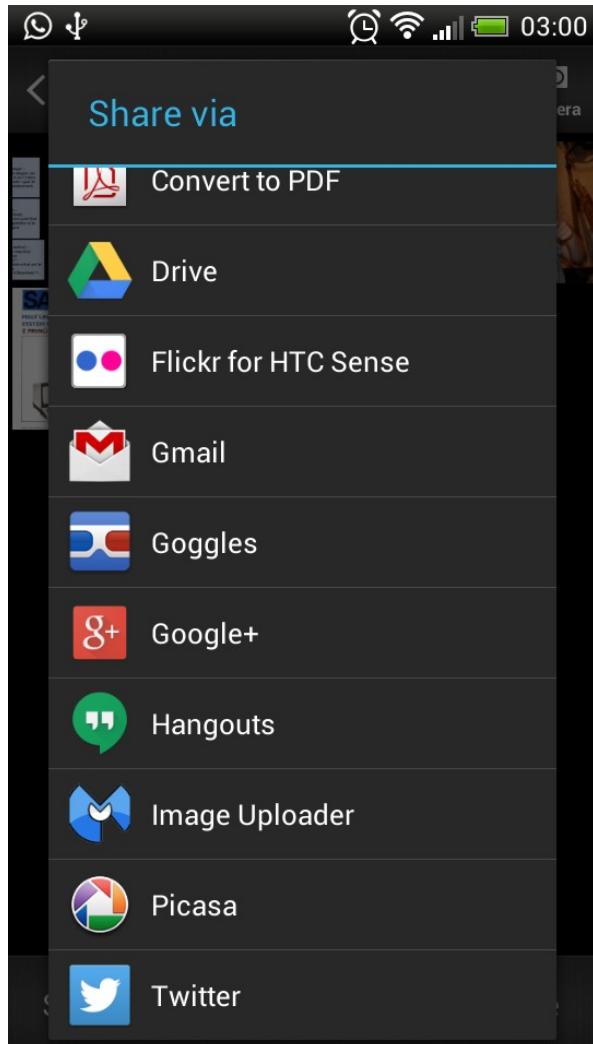

Automatic photo upload

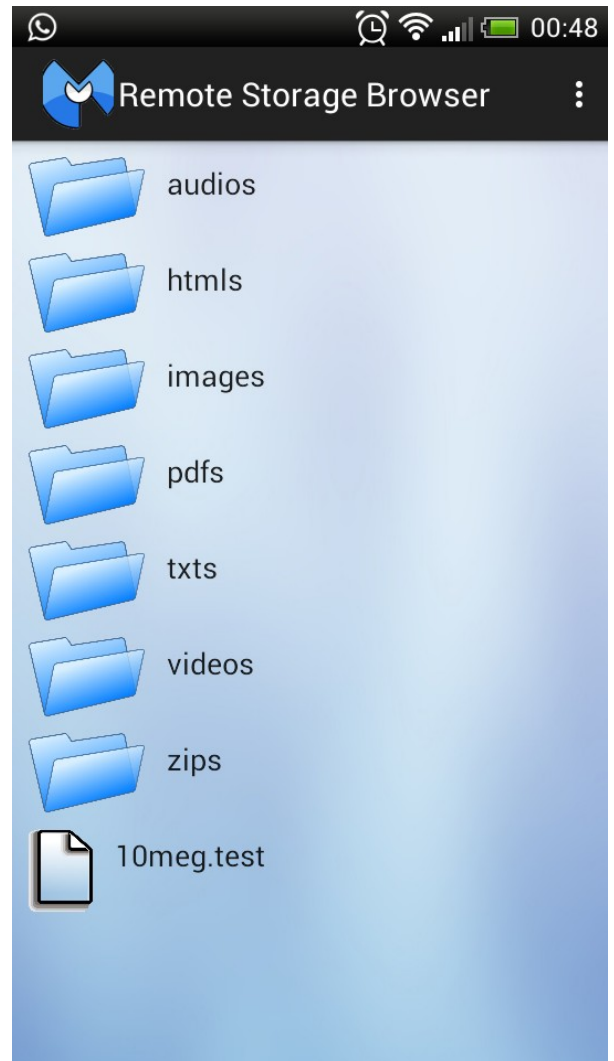

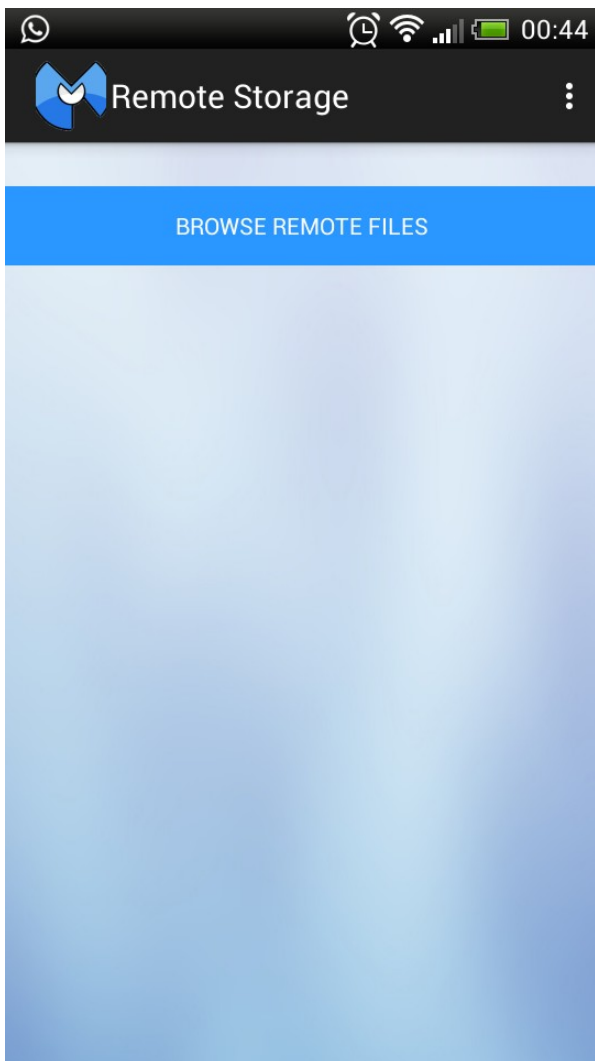

Check this option if you want your photos to be automatically synchronized with your home server.

Image Uploader

Share an image from your gallery with Image Uploader and it will be sent to your home server.

Browsing remote files

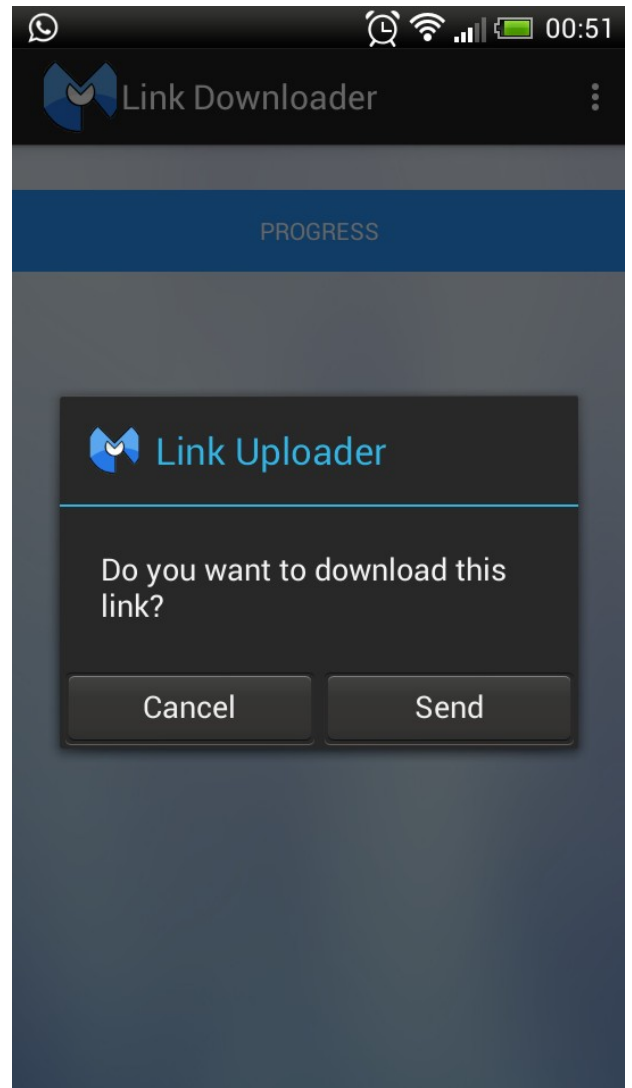

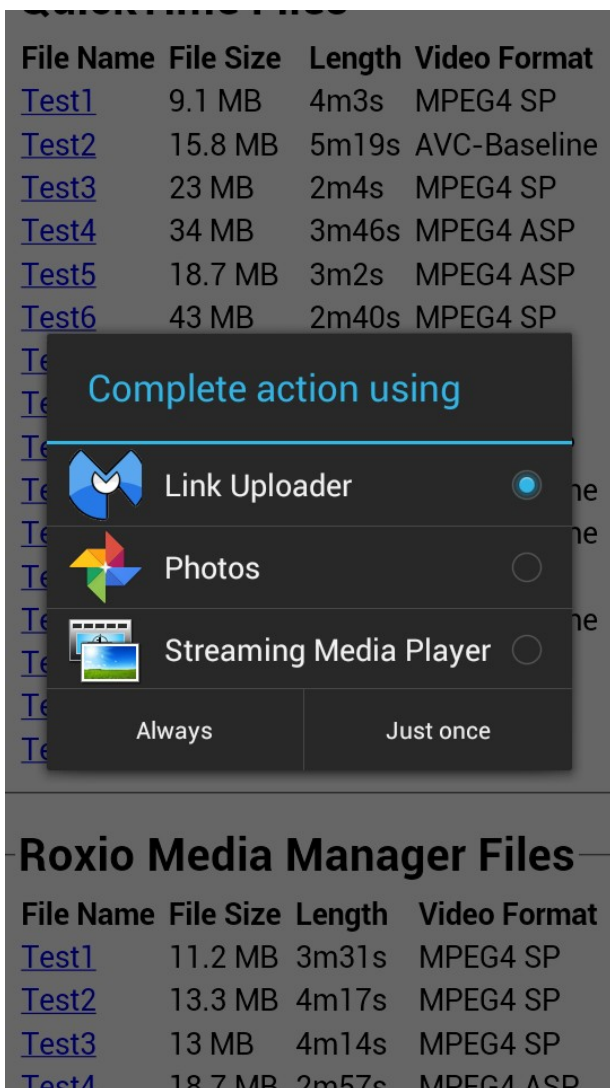

Access your files and directories on your home server.

Link Downloader

Starting a download

The link downloader plug-in allows you to send your server the order to download a big file. Just open the file in your browser as you were following the link and the application will be available to select.

Following downloads progress

Once you have started a download, you can check its progress in the Downloads Progress screen.
